

The Sieza MDS enhances prison security

There is a small furniture production line in one of the Polish prisons. Material deliveries arrive through the checkpoint, finished furniture is then transported through the same checkpoint out. Every day dozens of cars pass through. Because there is a real risk that the prisoners will try to escape stored in the finished piece of furniture, a proper check of passing cars is carried out.

Ticking the Boxes

- **Reliability of detection**
- **Easy to use**
- **Time saving during inspection**

Spec list

- **1x MDS Stationary**

Previously, the security guards made a physical check of the cars, which was very time consuming. The prison management demanded more effective control and a higher level of assurance that no one would get out. MDS has been tested under extremely difficult conditions. During the tests, all illegal attempts to sneak out people hidden in wardrobes or beds were successfully detected.
