

Sieza Peridect+ protects private property

Perimeter detection systems are crucial for enhancing the security of private villas. Our partner in Greece was asked by his customer to help him solve the security of his villa house in Thessaloniki. In addition to CCTV and a burglar alarm, a fence detection system was recommended. This system should provide early warning of potential intrusions, allowing security personnel to respond quickly and prevent unauthorized access. However, such a system had to be able to function reliably even on a very hard metal welded fence.

Ticking the Boxes

- **Reliable detection**
- **Ultra low false alarm rate**
- **Extremely sturdy fence support**
- **Easy maintenance**

Peridect+ was deployed successfully due to its ability to fine-tune the sensitivity of each detector. This feature was particularly utilized during the system calibration on a sturdy fence. It successfully eliminates nuisance alarms caused by weather while still providing full detection capabilities. The affordable long-term servicing costs were another determining factor in selecting Peridect+.

Spec list

- **1x CUP+**
- **2x LIP+**

- **1x LCP+**
- **1x IOP+/LAN**

- **150x DSP+**
- **400m of perimeter**
