Reliable protection in extreme Nordic conditions

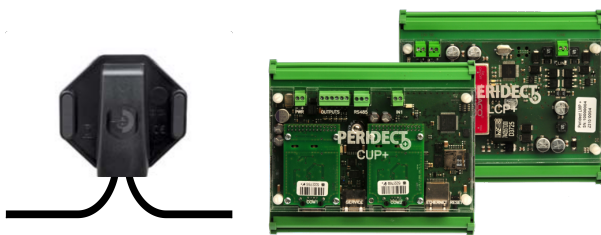

1800 meters of fence protected

GRADE 4 security cabinet

Peridect+ has proven its high security level GRADE4 in all weather conditions again.

Peridect+ is an advanced perimeter intrusion detection system designed to protect strategic high security infrastructure facilities operating in the demanding climatic and operational conditions of Scandinavia. Thanks to its robust design and sophisticated detection algorithms, it provides continuous protection for critical defense infrastructure. Regardless of the weather conditions, Peridect+ still provides perimeter security compared to other security solutions that have some challenges.

Ticking the Boxes

- **Reliable detection**
- **Resistance to environmental influences**
- **Minimal operating costs and maintenance**
- **Fast installation, modification or extension**

A unique principle of evaluating data from neighboring sensors significantly reduces false alarms caused by snow, ice, strong winds, or wildlife, factors typical for Nordic environments. The system contains no moving parts, ensuring high operational reliability even under prolonged exposure to frost, icing, and extreme temperature fluctuations. Peridect+ is fully compatible with Grade IV, PSIM's and CCTV systems commonly used in military applications, enabling centralized security management and rapid response by intervention units.

Spec list

- **1x CUP+**
- **733x DSP+**

- **2x LCP+**
- **2x IOP/RS485**

- **7x LIP+**
- **6x LSP+**
